PROFESSIONAL SUMMARY

DevOps-focused Computer Science undergraduate (Cloud Computing specialization, CGPA 8.48) with hands-on experience across Git, Docker, Kubernetes, GitHub Actions, Terraform, and the Prometheus/Grafana monitoring stack. Built and deployed three full-stack cloud projects, including a self-healing Kubernetes deployment and a live multi-service CI/CD pipeline. Seeking an entry-level DevOps/Cloud role to contribute to automation, deployment reliability, and scalable infrastructure.

TECHNICAL SKILLS

Cloud and DevOps: AWS (S3, EC2 basics), Microsoft Azure, Docker, Docker Compose, Kubernetes (Minikube), Jenkins, GitHub Actions, Terraform, Git and GitHub, Linux, CI/CD fundamentals

Monitoring and Observability: Prometheus, Grafana, node_exporter

Programming: Python, Java, C++, JavaScript

Web and Database: HTML, CSS, React.js, Node.js, Express.js, MySQL, MongoDB (Atlas)

Core Concepts: Networking fundamentals, virtualization, IaaS/PaaS/SaaS models

PROJECTS

DevOps Starter App — End-to-End CI/CD, Containerization, and Monitoring Reference Project

GitHub Actions, Docker, Kubernetes, Terraform, Prometheus, Grafana | GitHub: github.com/Ragini4505/devops-starter-app

- Built a two-job GitHub Actions pipeline that runs tests and automatically builds and pushes images to Docker Hub on every commit.
- Deployed a four-service Docker Compose stack (app, MongoDB, Prometheus, Grafana) and a matching Kubernetes deployment on Minikube, demonstrating automatic self-healing after a live pod failure.
- Provisioned infrastructure with Terraform and instrumented the app with custom Prometheus metrics, visualized in Grafana dashboards.

DevOps Dashboard — Unified DevOps Monitoring and Deployment Dashboard

React, Tailwind CSS, Chart.js, Node.js, Express.js, MongoDB Atlas | GitHub: github.com/Ragini4505/DevopsDashboard

- Built a unified web dashboard that aggregates five separate tools, GitHub, Jenkins, Docker, Kubernetes, and Grafana, into a single interface.
- Integrated live with the Jenkins REST API, Docker and Kubernetes APIs, and Prometheus, extended with node_exporter for real-time CPU, RAM, disk, and network metrics.
- Designed the frontend in React with Tailwind CSS and Chart.js for build history, container and pod status, and resource-usage visualization.

Tune Flow — Cloud-Based Music Streaming Platform

Node.js, AWS S3, JavaScript | GitHub: github.com/Ragini4505/tune-flow

- Designed and built a cloud-native music streaming app with a Node.js backend and AWS S3 for scalable audio storage and retrieval.
- Implemented audio playback, file upload, and user interaction flows, architected for horizontal scalability.

TRAINING AND CERTIFICATIONS

DevOps Trainee, Cyber Core, Mohali | June - July 2026

- Hands-on training in Linux fundamentals, Docker, CI/CD, Kubernetes, Git and GitHub, and Grafana.
- Studied monitoring-system workflows and how observability tooling fits into a production deployment pipeline.

45-Day Cloud Computing Training, Techcadd, Jalandhar | June - July 2025

- Gained hands-on experience setting up and managing cloud infrastructure on AWS and Microsoft Azure.
- Studied virtualization, IaaS/PaaS/SaaS service models, and cloud storage solutions.

EDUCATION

B. Tech Computer Science (Cloud Computing) — GNA University, Phagwara | 2023 - 2027 | CGPA: 8.48

STRENGTHS

- Strong problem-solving ability and quick learner, comfortable adapting to new tools and technologies; effective communicator with a track record of independent project delivery.
